AMENDMENTS

AMENDMENTS TO THE CLAIMS

1.-12. Cancelled

13. (Currently Amended) A system for synchronously delivering complementary data through a network, the system comprising:
a control unit operable to measure a first delay time associated with a first complementary data stream delivered to a first device and a second delay time associated with a second complementary data stream delivered to a second device, and synchronize the first complementary data stream and the second complementary data stream by introducing a relative delay to ~~which ever~~whichever of the first complementary data stream and the second complementary data stream corresponds to a shorter delay time of the first delay time and the second delay time, the relative delay being one half of a difference between the first delay time and the second delay time;
the first device connected to the control unit through the network; and
the second device connected to the control unit through the network,
wherein the first device is a vehicle navigation system and wherein the complementary data includes navigational video data delivered to the first device and supplementary data delivered to the second device.

14. (Original) The system of claim 13 wherein the supplementary data is audio data.

15. (Currently Amended) A system for synchronously delivering complementary data through a network, the system comprising:
a control unit operable to measure a first delay time associated with a first complementary data stream delivered to a first device and a second delay time associated with a second complementary data stream delivered to a second device, and synchronize the first data complementary data stream and the second complementary data stream by introducing a relative delay to ~~which ever~~whichever of the first complementary data

stream and the second complementary complementary data stream corresponds to a shorter delay time of the first delay time and the second delay time, the relative delay being one half of a difference between the first delay time and the second delay time; the first device connected to the control unit through the network; and the second device connected to the control unit through the network, wherein the first device is a video monitor and wherein the complementary data includes video data delivered to the first device and subtitles delivered to the second device.

16.-38. (Cancelled)

39. (New) The system of claim 13, wherein:

the first delay time is a time taken for a response to a first Packet Internet Groper packet sent to the first device; and
the second delay time is a time taken for a response to a second Packet Internet Groper packet sent to the second device.

40. (New) The system of claim 13 wherein:

the control unit transmits a message to begin delivery of the complementary data at a predetermined time.

41. (New) The system of claim 13 wherein:

the control unit is adapted to determine a location of services near of vehicle, the services comprising at least one of a location of a hospital and a gasoline station.
